

TASK 3 – WEATHER APPLICATION USING REST API

Goal:

Use a public REST API to fetch and display weather data dynamically on the webpage.

Description:

Developed a responsive weather application using HTML, CSS, JavaScript, Bootstrap, and REST API integration. The application allows users to search for a city and view real-time weather information such as temperature, humidity, weather conditions, and wind speed dynamically.

Technologies Used:

- HTML5
- CSS3
- JavaScript
- Bootstrap
- REST API
- Fetch API

Features:

- Responsive Design
- Real-Time Weather Updates
- REST API Integration
- City Search Functionality
- Loading and Error States
- Dynamic Weather Information
- User-Friendly Interface
- Mobile-Friendly Layout

Project Workflow:

1. Designed the webpage structure using HTML.
2. Styled the application using CSS and Bootstrap.
3. Integrated REST API using Fetch API in JavaScript.

- Weather Dashboard**
